

Programowanie Husarka DSP via port RS232 z wykorzystaniem programu CoolTerm (wersja 1.9.1.z dnia 2022-01-17). Jest to wersja 32 bitowa, ale pracuje również na komputerach z OS 64 bity.

Program można pobrać również z mojej strony
<https://sq2rh.it2.pl/homemade/CoolTermWin32Bit.zip>

Jest wiele podobnych programów, którymi można w łatwy sposób via RS 232 i bez rozkręcania obudowy zaprogramować Husarka DSP, ja wybrałem akurat ten.

Poniżej instrukcja obrazkowa w kilku krokach, jak zaprogramować Husarek DSP z użyciem programu CoolTerm.

CoolTerm is an easy-to-use terminal for communication with hardware connected to serial ports.

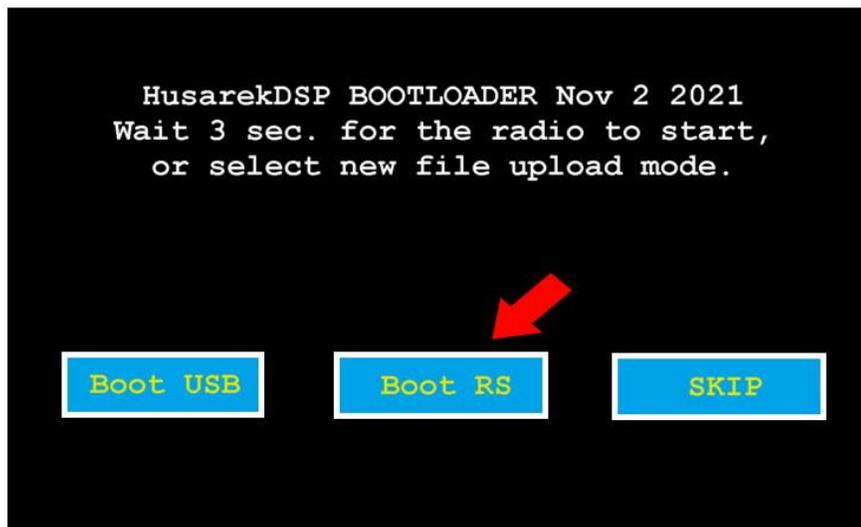

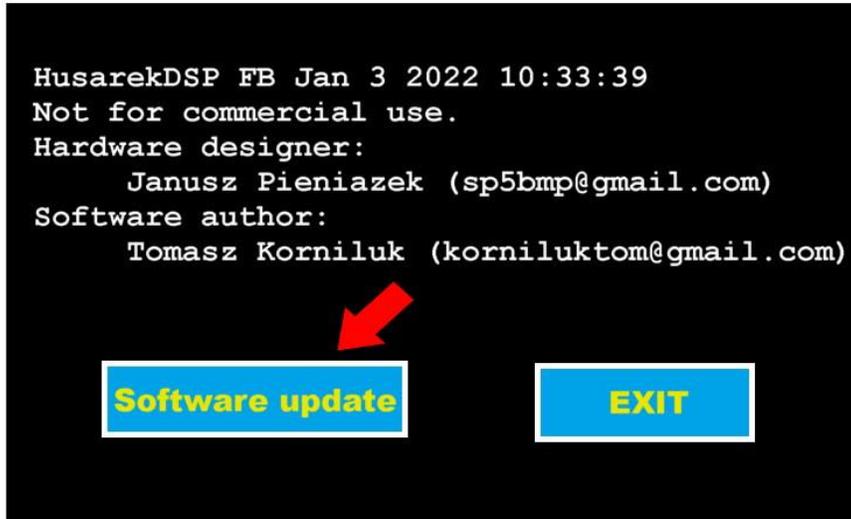

CoolTerm is a simple serial port terminal application (no terminal emulation) that is geared towards hobbyists and professionals with a need to exchange data with hardware connected to serial ports such as servo controllers, robotic kits, GPS receivers, microcontrollers, etc.

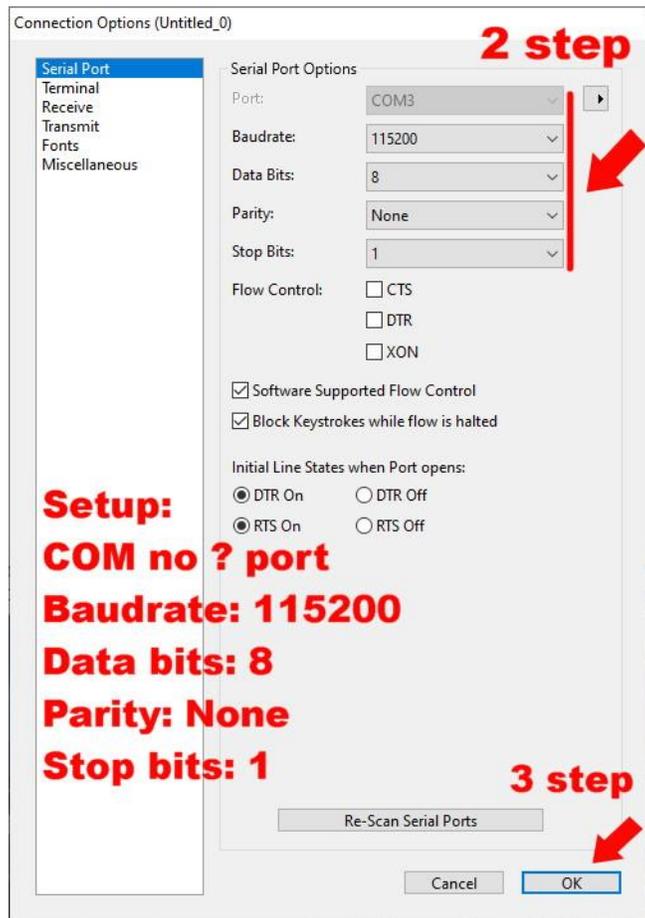

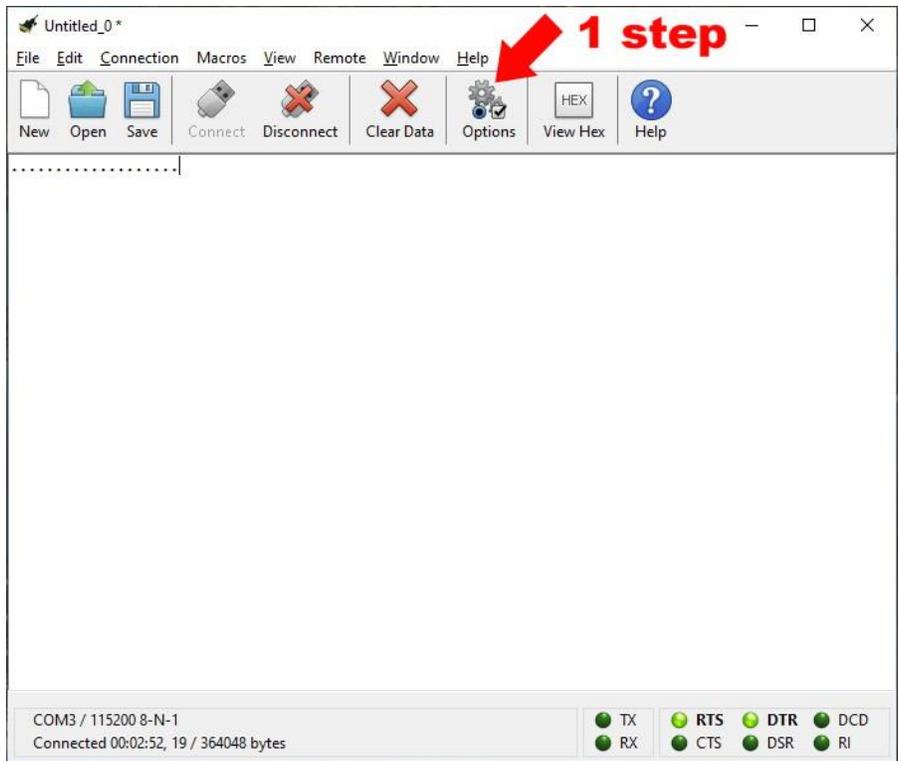

The features of CoolTerm include:

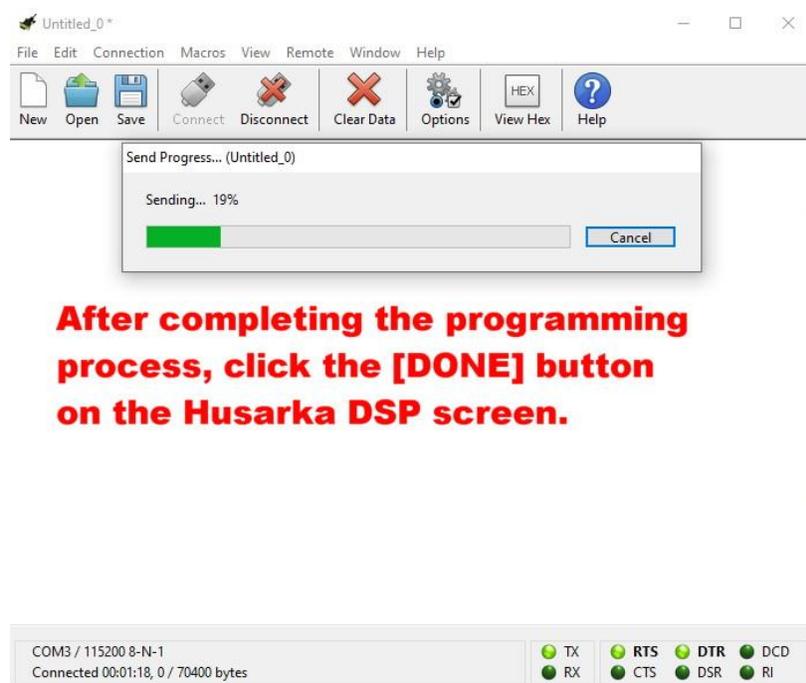

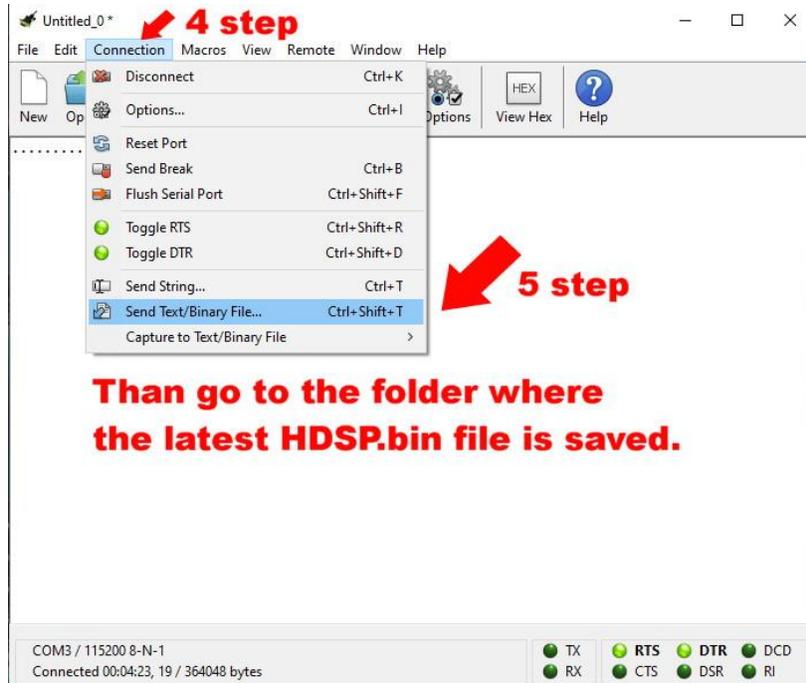

- *Capability of multiple concurrent connections if multiple serial ports are available.*
- *Display of received data in plain text or hexadecimal format.*
- *Special character handling.*
- *Sending data via keypresses as well as a "Send String" dialog that supports data entry in plain text or hexadecimal format.*
- *Sending data via copy-paste of text into the terminal window.*
- *Sending of text files via dialog or drag-and-drop.*
- *Capability of capturing received data to text/binary files.*
- *Local echo of transmitted data.*
- *Local echo of received data (loop back to sender).*
- *Hardware (CTS, DTR) and software flow control (XON).*
- *Visual line status indicators.*
- *Capability of manually toggling line states of certain handshaking signals when hardware flow control is disabled.*
- *Configurable character, line, and packet delays.*
- *Capability of saving and retrieving connection options.*
- *Scripting.*
